ABSTRACT:

PURPOSE: To effectively use discounted service with which a telephone line group joins by charging speech from the telephone line group made into groups as the speech for a line with minimum charge in the group.

CONSTITUTION: A group discrimination part 2 retrieves a group information table 5 setting a speech origin telephone number acquired by a speech information acquisition part 1 as a key, and discriminates whether or not the number is registered as the group. When it is registered, all the information of the group are sent to an optimum charging line decision part 3. A charging information data base 8 is retrieved, and the charging information of the number is acquired, and the optimum line decision processing is performed on it. Also, when it is judged that the number does not belong to the group, the speech origin telephone number is set as the optimum telephone number. A charging part 4 performs charging on the optimum telephone line decided by those processing. After speech is completed, the charging information is written on the data base 8 setting the optimum telephone line number as the speech origin telephone number.
